1. The information disclosure statement filed after final rejection on 20 May 2005 fails to comply with 37 CFR 1.97(d) because it lacks a statement as specified in 37 CFR 1.97(e) and it lacks the fee set forth in 37 CFR 1.17(p). See MPEP 609. It has been placed in the application file, but the information referred to therein has not been considered.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

3. Authorization for this examiner's amendment was given in a telephone interview with Mr. Lee on 28 June 2005.

4. The application has been amended as follows:

In the Claims:

Claim 19, line 1—"data carrier" has been replaced by "machine readable medium".

5. This Examiner's amendment was made so that claims 19 – 20 would not read upon a "carrier wave" or other such components by which the "program product" would not be fixed in a tangible medium and not qualify as a statutory invention under 35 USC 101.

6. The following is an examiner's statement of reasons for allowance:

After giving consideration to the full discussion presented in applicant's brief on appeal, filed 2 May 2005, the Examiner finds persuasive applicant's arguments that independent claims 15, 17, 19 are not taught by the combination of Angiulo et al.

Art Unit: 2173

("Angiulo"; US #6,275,829 B1) in view of Fleskes ("Fleskes"; US #6,529,910 B1), nor by any of the remaining prior art now made of record.

The Examiner's position had been that Angiulo's use of the HREF functionality whereby an image thumbnail can call a larger object image was enough to read upon the claimed use of "shortcut objects", where a "target address in the shortcut object" (a thumbnail link on the page that references an object file) can call the "content object" of the main image file when the page is parsed and the command executed. Fleskes was additionally relied upon to show the use of a parsed template representation like that which contains applicant's "plurality of commands for inserting content into the webpage".

A closer consideration reveals, however, that there is a significant difference between the claimed "shortcut object" and the way it is used and Angiulo's hyperlinked thumbnail. Specifically, and as applicant points out at page 5 of the brief, the claims recite that a "template" has "commands for inserting content into the webpage", such that a "source address" contained in a "command" can call either a "content object" or a "shortcut object" that contains a "target address referencing one of the content objects". Even if the HREF command to present a link to the larger sailboat image in Angiulo were interpreted as a "shortcut object" (and such a segment of HTML source code does not truly read upon the definition accepted in the art for "object"), it is not accessed by "parsing the template" and "executing" a "command" that calls such an object located at a "source address".
